ROOFING

CORRUGATED

Corrugated roofing offers the timeless elegance and matchless adaptability of the traditional corrugate profile.

Produced in Whangarei, Auckland, Hamilton, Tauranga, Wellington and Christchurch.

CUSTOM ORB®

TRAPEZOIDAL

Trapezoidal, or rib, profiles have sloping-sided ribs and are fastened through the profile. They are available in a number of configurations to suit a vast range of performance and appearance criteria.

They can be categorised by common application into Residential/Commercial and Commercial/Industrial groups.

RESIDENTIAL AND COMMERCIAL PROFILES

Steel & Tube offer four **Trapezoidal** rib products with rib heights varying between 20mm and 30mm. These are typically utilised in domestic roofing, or for commercial roofing and cladding applications where spanning ability is not a prime requirement.

SIX RIB

Produced in Tauranga

Six Rib has a more subtle rib and wider pan, for an attractive, economical solution to most domestic roofing applications.

Because both **Plumbdek®** and **Trimform®** profiles feature a strong rib design, they are equally at home in residential applications or at work in commercial situations.

PLUMBDEK®

Produced in Auckland, Tauranga & Christchurch

TRIMFORM®

Produced in Hamilton

TRIMLINE®

Produced in Auckland, Whangarei & Wellington

Trimline has six bold ribs making it an exceptionally attractive roofing and cladding profile.

*** Note:** Regional variances can occur with different base materials and thicknesses. If cover is crucial, please discuss with Steel & Tube prior to ordering.

COMMERCIAL/INDUSTRIAL PROFILES

Where larger spans or greater robustness is required, the higher-ribbed trapezoidals make their mark. **ST7®** and **ST900®** have medium height ribs, giving a bolder look for residential applications and for commercial and industrial work.

ST7®

Produced in Wellington

ST900®

Produced in Auckland and Christchurch

ST963

Produced in Auckland & Christchurch

ST963 is a profiled metal roofing and cladding profile with four trapezoidal ribs of 46mm in height and a 230mm wide pan.

TROUGH SECTION

Steel & Tube's trough section profiles are designed to meet a variety of needs from low pitch and long lengths to steep pitches where the clean lines are enhanced by the secret fixings.

In some cases indentations from the clips may be noticeable although this should become less noticeable with weathering over time.

KLIPOK

Produced in Wellington

HI RIB

Produced in Auckland

SPRING CURVED

Steel & Tube is equipped to precurve corrugate and three trapezoidal profiles in residential or commercial designs where radii exceed the limits for drape or spring curving. Guidelines on **Spring Curving** are available from your nearest Steel & Tube roofing branch.

LEGACY®

LEGACY® has been specifically introduced to complement our EuroLine range of roofing products, with their unmistakable eighteenth century standing seam roofing style.

It incorporates modern high strength roll forming technology and is available in continuous lengths.

It is important to note that an architectural feature of this product is the undulation of the wide flat pan of the profile. In some situations, indentations caused by fixing clips or purlins may be noticeable although this should become less apparent with weathering over time.

LEGACY®

Produced in Auckland

EUROLINE®

Euroline® is an elegant descendant of eighteenth century standing seam roofing.

Euroline® is obtainable in two profiles: **Battenlok** and **Seamlok**. Standard pan widths are typically 500mm, but 300mm or 400mm can also be supplied.

For wall cladding, **Seamlok** is the recommended profile.

It is important to note that an architectural feature of this product is the undulation in the wide flat pans. In some situations marks made by the fixing clips may be noticeable although this should become less apparent with time.

BATTENLOK

Produced in Auckland and Christchurch

SEAMLOK

Produced in Auckland and Christchurch

COMMON FLASHINGS

KICK OUT BARGE

NOTCHED APRON

BIRDS BEAK BARGE

SOFT EDGE APRON

SOFT EDGE HEAD BARGE

For corrugate barges, your supplying branch may have dimensions standard for their area. Dimensions for other profiles dimensions should be specified by the installer. Internal angles on soft edge or notched barge or apron also need to be specified.

*200mm wide cover ridge is also available.

WALL CLADDING

TRIMKLAD®

Produced in Hamilton

Trimklad® has an unobtrusive rib and a very wide swaged pan for any installation where a neat appearance and lower labour costs are an essential design criteria.

STC900®

Produced in Auckland

STC900® is specially designed for pan-out wall cladding or canopies where the normal underside of the profile is exposed to view. Fine flutes in the face highlight the surface and accentuate the negative detail, while modifications to the side lap detail means that weatherproofness and good looks are maintained on both sides of the profile.

RAINWATER SOLUTIONS

TRADITIONAL

CUSTOMLINE®

Produced in Tauranga

- **Customline®** is a larger, long run version of the classic quarter round, and is deeper than other designs, for greater water carrying capacity and enhanced aesthetic appeal.
- **Customline®** can be fitted with fully concealed brackets to enhance the clean smooth lines or with external brackets, for a timeless classic look.

CROSS SECTIONAL AREA

7100mm²

CONTEMPORARY

PLUMBLINE®

Produced in Auckland

- **Plumblime®** provides a large capacity domestic spouting which is also at home on smaller commercial work.
- **Plumblime®** has a strong profile with a double swaged face and swaged base.
- **Plumblime®** is fixed using concealed clips for emphasis of its bold lines.

CROSS SECTIONAL AREA

10000mm²

COMMERCIAL GUTTERS

Produced in Whangarei, Auckland, Hamilton, Tauranga, Wellington and Christchurch

The most commonly specified commercial gutters are 175mm and 300mm, however, as each is specifically folded, the dimensions can be varied greatly to suit any application, provided appropriate fixing brackets are sourced.

Standard pressed internal brackets are available for the 175 gutter, however for extra strength, specially fabricated steel external brackets are recommended (colour matched if required).

Steel & Tube provides details regarding industrial gutter bracket design and placement, available from our website www.steelandtube.co.nz.

COMMERCIAL GUTTERS TYPICALLY AVAILABLE IN 175mm AND 280mm-300mm WIDTHS

CROSS SECTIONAL AREA

21,000mm²

CROSS SECTIONAL AREA

31,350mm² (285mm width)

Note:

Dimensions are indicative only. There may be differences in dimensions between regions. Please contact your local Steel & Tube branch for more information.

Please Note: All profile dimensions are nominal.

FASCIA SYSTEMS

MULTI-LINE® FASCIA

- An attractive and economical advance over timber fascias, **Multi-line® Fascia** can be fitted with a range of spoutings for contemporary or traditional appearances.

Steel & Tube's fascia systems are available exclusively through qualified installers.

MULTI-LINE® FASCIA 150

Produced in Tauranga

MULTI-LINE® FASCIA 185

Produced in Wellington and Christchurch

BIM-spec™ is a one stop portal for all Steel & Tube's specification and technical content. It provides access to a large library of 2D and 3D CAD content and building information models (BIM) across a wide range of Steel & Tube product categories. This includes manufacturer-specific and generic libraries suitable for all specifiers, consulting and fabrication engineers and specialist consultants/contractors.

The BIM-spec portal can be accessed through our website www.steelandtube.co.nz
